## PROJECTS

**Attendance System using Voice Authentication.** An Attendance System using Voice Authentication is a web-based project that employs machine learning to recognize and verify users' voices for recording attendance. It integrates voice recognition models with a web interface to authenticate users in real-time.

**Weather App using Python.** A web application that provides real-time weather reports by fetching data from weather APIs. It displays current weather conditions, forecasts, and other relevant information for specified locations, updating automatically based on the latest data from the API. <https://yash-website-6p3z.onrender.com>

**Car Rental Web App.** Created a dynamic web application using React.js and Tailwind CSS. Key features include customizable Dark and Light mode options for enhanced user experience, a responsive Navbar for seamless navigation, and a mobile-friendly Sidebar Navigation design. The app boasts a fully responsive layout, ensuring compatibility across various devices, with animated elements and a sleek, modern interface design. <https://car-rental-yash.netlify.app>
